## *Light Painting: Part II*

The Morgan Hill Photography Club's April meeting is the second part of a hands-on program where members of the club will use specific camera settings to create light paintings. In the March meeting, we explored the camera settings for making this type of photograph. What!

You missed the March meeting?

That's okay because we will have a brief review and facilitators to help members achieve these settings. In April, we'll actually make light paintings. The April meeting will, once again, be at the Community & Cultural Center (CCC) allowing a unique opportunity to host this kind of hands-on program.

Here's what you need to know: 1) Self-timer; 2) Shutter Priority/Time Value; 3) Manual Focus. That's it! If you are new to these settings, use your camera manual to locate the buttons, menus, or switches you need to set up your camera. If you know these settings by heart, be ready to help a friend.

Here's what you need to bring: 1) camera with charged battery; 2) tripod—if you have one; 3) flashlight(s) to paint with; 4) subject matter to paint. One more...your imagination!

There are so many objects suitable for light painting. Here are some suggestions: timeless, fanciful, organic (think still life), textured, musical, antique, edible, etc.

Here's what is going to happen: members will be divided into small groups (5–6 persons) to create a scene for the initial paint by pooling the objects together. Next, we set up cameras with a basic recipe for light painting and finally it's *lights out* for genuine subject painting.

The goal of this program is to play with light, explore camera settings, share your experience and have some fun painting with light. You'll not want to miss this one.

# Editor's Notes

by [Jeff DuBridge](#)

I love taking my digital and film cameras and photographing a wide variety of subjects. In addition to the camera, I love taking the captured photographs, processing them, and then printing out my favorites. With these printed favorites, I keep them for myself or provide them, sometimes sell them, to others. I love to print. The computer screen can only provide so much.

The first twenty years of my career was spent doing occupational safety and environmental work both in-house and as a consultant. I have taught thousands of people about how to plan operations and the behaviors needed to reduce hazards in the workplace to the employees and the environment.

The biggest issue the employees wanted to know about was chemicals. Chemicals can start fires, cause cancer, kill wildlife, make the floors slippery, etc.

Here's a question for you: what around us does not contain chemicals? "Gosh, I hate chemicals, I try to stay away from them" was a common response from students when asked that question. Here is the answer: there is nothing that does not contain chemicals. You are nothing but chemicals, as am I, the person next door, your car, the air, outer space, everything. Even the meaning of life is nothing but a bunch of stationary chemicals and chemical reactions in your nervous system.

Everything contains chemicals. I also like to argue that religions are nothing but a large bunch of chemicals, but we'll deal with that issue another day.

Are there hazards in the chemicals (inks) used in making prints? Let's see.

What I have done is look at the inks used in the latest 17" inkjet photo printers from Epson and Canon, the SureColor P800 and the imagePROGRAF PRO-1000, respectively. I have downloaded the regulatory required SDSs (Safety Data Sheets) from both manufacturers' website and made a close analysis.

Let's begin with Epson. The P800 uses five CMY inks along with four black inks: light gray, light light gray, matte black and photo black. All the inks contain the following: water, proprietary organic materials, glycerols, colorants, and triethanolamine, usually in that order by concentration.

I always hated the *proprietary* or *trade secret* wording when provided in the list of chemicals on an SDS. In certain circumstances, either a doctor or an industrial hygienist/safety professional must be told, by the manufacturer or supplier of the trade secret containing chemical, the full chemical name(s), or enough chemical type, family, or isomers needed to assess potential employee overexposure. After reviewing all the physical and biological properties of the proprietary compounds listed in the Epson SDSs.

One ink, T8503 (Vivid Magenta), contains TEGBE (Triethylene glycol monobutyl ether) and ethylene glycol (antifreeze) which are some slightly hazardous chemicals. The legal maximum exposure

limit to the ethylene glycol is 50 ppm (parts per million) as a ceiling concentration through inhalation. Due to the fact the ethylene glycol hardly evaporates at all, don't worry about inhaling it. Ingesting the ethylene glycol can be dangerous to people and the environment though. Drinking over 1/2 gallon of the ink, all at once, maybe deadly. The TEGBE is less of a hazard, don't drink it though.

T8508 (Matte Black), contains Triisopropanolamine and can be harmful to aquatic organisms and may cause long-term adverse effects in the aquatic environment. Synopsis: do not open the cartridge and pour it down the sink, into the storm drain, in your fish tank, or drink large quantities of it yourself.

Finally, T8501, T8507, T8508, T8509 contain carbon black (no, not carbon diamonds) and the National Institute of Health does state that exposure to large quantities (fine airborne dusts—not liquids) may have a slight chance to cause cancer. Expose yourself to invisible concentrations (very fine particles) of the dried ink eight

hours a day, forty hours a week, for a decade or more and then, yes, you might get cancer.

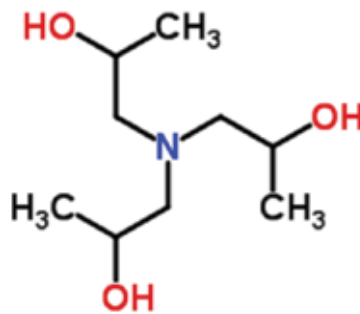

Darn, I am running out of space to talk about the chemicals in the Canon imagePROGRAF PRO-1000 printer but there is not much more to say. The imagePROGRAF PRO-

1000 contains twelve inks and the ingredients are almost exactly the same as the Epson SureColor P800 inks. Three inks contain the carbon blacks, no inks say, directly, that they contain ethylene glycol (probably though, since their SDSs says *Glycol*, and glycols usually contain ethylene glycol), and a definite zero inks contain Epson's P800 triethanolamine or TEGBE.

One chemical the imagePROGRAF PRO-1000 uses in each cartridge, which the P800 does not, is 1, 2-benzothiazol-3-one. The chemical is a microbiocide/pesticide and prolonged exposure to the skin (many hours) may cause dermatitis. Here is the thing though, this chemical is present in a very low concentration and also used in items such as cosmetics and latex gloves. With normal use, next to zero hazard potential.

Conclusion: opening the cartridges and drinking a 1/2 gallon or more of the ink a day will make you sick. You can't pour the inks down the drain, bury them in your backyard, feed them to animals, and do not set them on fire. Normal use though equals next to no hazards.

The SDSs for all Epson and Canon sets of water soluble inks for the printers mentioned are provided at the end of this month's *InFocus*. Please feel free to contact me if you have any questions.

## This Month's *InFocus* Photographer: Jin Pak

Dr. Jin Pak, D.C. is an excellent local chiropractor, loves photography, and he is one heck of a shooter. Jin has also been interviewed in the this month's *The Master Photographers* and he has some excellent ideas for advancing the club—lot's of ideas, be sure to read. As for shooting, as you'll soon see, it's the guns he loves to shoot.

January Interview with Jin Pak by Jeff DuBridge

**Jeff DuBridge:** I have a variety of questions for you but is there anything in particular you wish to talk about today?

Jin Pak: No, not really...does the club have a YouTube channel?

**JD:** No.

JP: With a YouTube channel, activities such as Photo Safaris, monthly meetings, various training classes, presentations, can be shared with a large number of people.

One example is the live streaming or recording of monthly meetings. With recording, local people that were not able to make the meeting, or worldwide viewers could view the meeting either live or recorded, whichever way they choose.

The People Group and their photography at the church could also do a recording and have it presented on YouTube.

**JD:** As I understand, one of the main intents of the club is to have monthly meetings for members to advance themselves and enjoy their photography with others. Learning and sharing with others as a group.

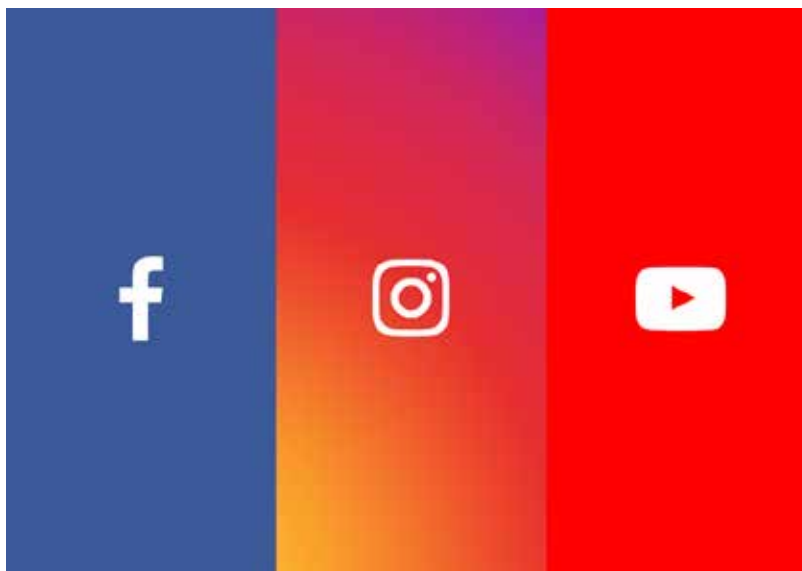

While your ideas sound positive, without a bit more of an argument, sales pitch, as to how this can grow meeting attendance, the Executive Board is going to be quite hesitant to take on such tasks. It's a tough sell.

JP: If the Board wants growth in the club, it needs to branch out and advertise, inform, beyond, as you mentioned the advertisement focused on old people, by areas such as YouTube, Instagram, the purchase of keywords on Facebook, or various search engines.

These are all simple ideas.

What do you and others get out of the monthly meetings?

**JD:** I enjoy the social interaction, sharing—as do others—along with the presentations or activities to potentially progress my photographic techniques. Additionally, some thoughts can arise for me on how I might use various topics or simple

observations for my own personal projects—I do not necessarily copy what I observe or learn but for use as a simple tool in a different form from what was observed. An example would be the use of a presentation of specific lighting in portraits, where I can then use the same lighting techniques upon photographing, say, a fern, a flower.

JP: While a lot of people do come to the meetings for both social and photo-

graphic progression, the club's advanced use of the web can assist members in learning apart from just the monthly meetings.

Over half the club members spend time learning on YouTube, so the club could use YouTube themselves and help members, national and worldwide viewers, as well as potential local viewers who may wish to become personally involved with the club as members and meeting attendees.

I love attending the meetings with presentations by photographers outside the club. More outside photographers would see videos of the club during meetings and would contact us, not the other way around, to make presentations. Such presentations would be at no cost, seeing how the photographers would benefit with the meeting providing advertisement for themselves.

**JD:** Do you have any ideas for increasing our demographics?

JP: We may want our demographics to become a little younger. We can market to a younger audience through interaction with local high school students taking photography classes. The high school students want to learn and are constantly using web interaction in Instagram, Facebook, with both their standard cameras and iPhones.

Through presentations, training sessions in YouTube, the club can teach the students methods to improve their use of Instagram and Facebook. Advance photographic quality and the expansion of ideas, subjects, meanings in their pictures.

After, say, three YouTube videos, the students would be offered the chance to attend a club meeting to further advance their photography. Hands-on activities and simple sharing of photographs with positive feedback would further refine their skills.

The People Group is a good area to use student interaction. Students can be offered training by club YouTube videos as well as, again, hands-on people photography in the People Group. With

January Interview with Jin Pak by Jeff DuBridge

people, the People Group will likely learn, from the students, excellent posing ideas they may not be currently considering, with the students learning in the same manner from club members.

**JD: I know my first son, when he took the photography class at Ann Sobrato High School, was hesitant to get out there & click, click away. One day, against his will, I dragged him to the park and we spent the day photographing everything there was to be photographed. He loved it.**

JP: Yes, high school students want extracurricular activities. Again, student interaction with the People Group, Photo Safaris, InFocus typographic assistance are areas the students could use.

**JD: Honestly, while I have trained people quite a bit, including high school and younger people, providing instruction is not always easy. Photo Safari tag alongs sounds a bit too simple, depending on who the students are interacting with, if anyone, they may not get much benefit from the Safari further than what they may receive wandering around the same area themselves.**

**Extracurricular activities, be it hard core member and student interaction, or a more laid back guidance instruction, takes a fair amount of effort and planning to offer true aid. I agree with you, I already have plans to speak with the high school photography instructor**

**at Sobrato, yet I can count on one hand, no more, the number of club members who might wish to interact with students.**

**Your ideas all sound good. Now, can you sell it to the club?**

JP: We shall see. You mentioned that these issues will be brought forward to the Executive Board, and anyone who reads our talk. A start will take some good effort and I'd definitely be available for game plan and you'd be a phenomenal presenter.

As you can tell, I have all sorts of ideas and one would be a meeting like the Annual GPP (Gulf Photo Plus) ShootOut

titution day) and to plan, take, and post process the photographs, live, on stage, while talking through what they are planning to do, in real time, then taking the photographs, and, finally, altering the photographs on the computer. All of this has to be done in 30 minutes and while

one photographer is on stage, the other two are outside and have no idea what they will be doing. Each person has the same subject.

*[Jin shows me, on his iPad, the actual 2016 GPP ShootOut competition in YouTube (<https://www.youtube.com/watch?v=p9UgIpkAN3E>). The first part of the video is a bit slow but once the competition is presented and starts, you'll be glad you gave it a try. After the video, Jin and I talked about how the same competition can be done in the club, with two competitors, during a standard meeting time.]*

In the end, the winner is chosen by audience applause.

**JD: Almost done. If you could choose any car, money aside, what would it be?**

JP: An LS swap Miyata.

**JD: You enjoy riding bicycles. If you were offered any bike you want, no charge, what would it be?**

JP: An electric bike.

**JD: As with the card and bike, no charge, if you had a choice between any one camera or one printer which one would it be.**
